

- ! Using Method of String Class ! -

How to make object in Java String ! -

Class Student

{

public static void main (String [] args)

{

int scbl;

char grade;

float per;

get();

show();

}

Student S ;

S = new Student ();

S.get();

S.show();

Object

Student S = new Student ();

Example

```
class Test
```

```
{
```

```
    public static void main (String[] args)
```

```
    {
```

```
        String String Reference S1;
```

```
        Object ← S1 = new String ("Bhopal");
```

```
        System.out.println (S1);
```

```
    }
```

```
}
```

* Java does not show Address

Important String Method

1) length() :- It is an Instance Method (Non static) and return the length of string.

prototype :- `public int length()`

class Test

{

public static void main (String [] args)

{

String name = new String ("Sachin")

int x;

x = name.length();

System.out.println ("length of string is " + x);

}

}

length of string is 6

2) charAt() :- This method is Instance Method (Non Static) and it return the character present at the index passed as argument.

prototype :- public char charAt (int) ^{Index}

Syntax :-

```
{  
    String name = new String("Sachin");  
    int x = name.charAt(2);  
    System.out.println(x)  
}
```

}

3) equals() :- This method is Instance method (Non static) and it compare two strings and return true or false

prototype :- public boolean equals(String)

Syntax :-

class Test

{

public static void main (String [] args)

{

String s1 = new String ("Bhopal");

String s2 = new String ("Bhopal");

String s3 = new String ("bhopal");

System.out.println (s1.equals(s2));

System.out.println (s2.equals(s3));

}

}

True False.

4). equalsIgnoreCase():-

This is Instance Method (non Static) and compare to two String but it ignore Case Sensitivity.

Prototype:- public boolean equalsIgnoreCase (String)

```
String s1 = new String ("Bhopal");
```

```
String s2 = new String ("bhopal");
```

```
String s3 = new String ("BHOPAL");
```

```
System.out.println (s1.equalsIgnoreCase (s2));
```

```
System.out.println (s2.equalsIgnoreCase (s3));
```

```
}
```

```
}
```

↓

It ignore the case sensitivity

True
True
